Make your core business applications resilient & future proof

Legacy modernization made easy with USoft low-code

Fine wine ages well over time. Traditional software applications usually do not, leaving organizations with headaches just like the ones that come with lesser wines. The solution? Transforming your legacy applications with the USoft low-code platform and our unique incremental approach to unravel legacy systems and rapidly modernize your legacy landscape. Make restrictive core business applications resilient and future proof without disrupting your business operations.

The legacy headache

Legacy applications, virtually every organization has at least one. They are expensive and time-consuming to maintain, rigid and difficult to change. Critical business knowledge is often hidden or lost in complex code and on top of that, finding people with the right skill set to do maintenance or make changes is becoming more complicated, creating dependencies on the small number of available people.

The result? Your business becomes restricted by legacy systems and your digital transformation becomes more complicated. Digital transformation should enable your organization to be able to react quickly, making effective use of your IT solutions to fully support your business. What if there is a simple way to rapidly modernize legacy applications and realize solutions that provide the resilience, scalability, and agility your business needs to be future ready?

Legacy modernization made easy

The USoft approach for legacy modernization is aimed at putting you back in charge of your legacy core business applications. Whether you need to extend key business processes or replace complete applications. With the USoft low-code platform and our legacy modernization approach, you can enhance, complement, or replace your legacy software.

Start to revitalize your legacy landscape today

Upgrade capabilities

Use low-code development to easily extend and enhance capabilities of core systems that function as required but cannot keep up with your business needs. Focus on building the functionality your business needs with zero disruptions for core operations.

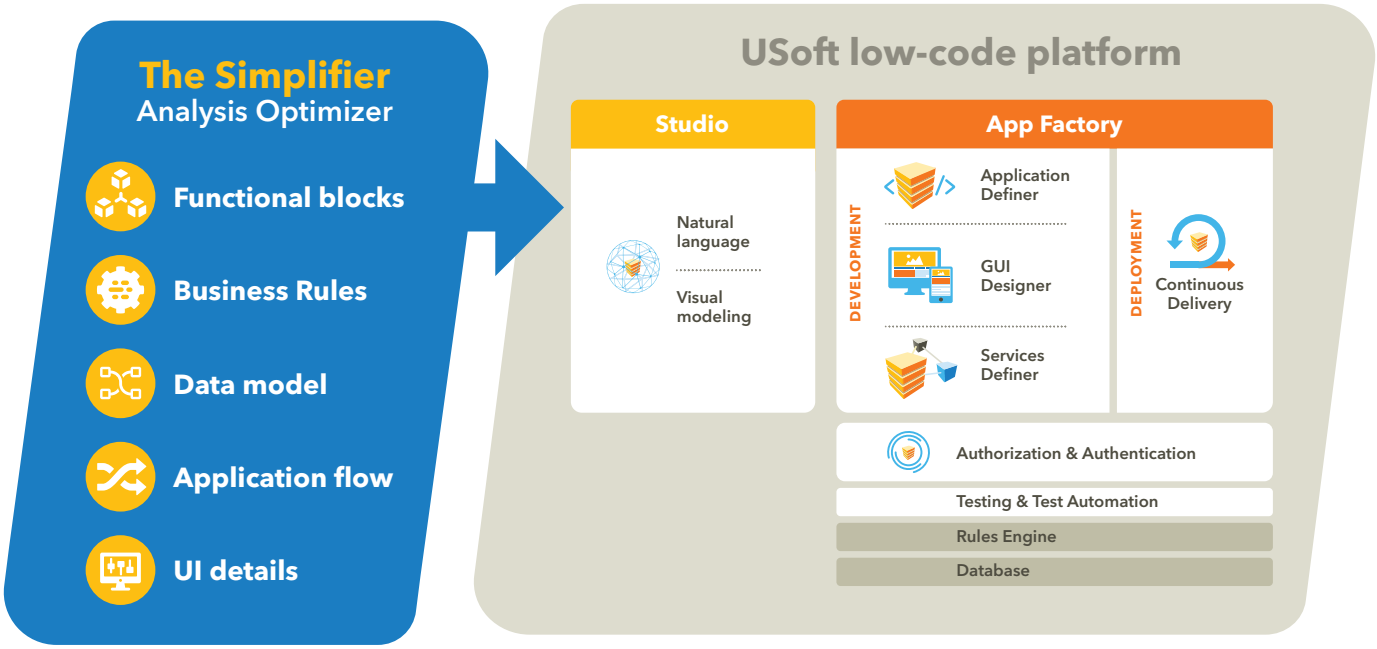

Replace & improve

Adopt an incremental approach to completely transform legacy systems and landscapes. Minimizing the risks, maximizing your business impact and with full flexibility to enhance and extend functionalities that deliver modern solutions with even more business value.

USoft makes your legacy software resilient & future proof

In an ideal world you would press a button and by magic your legacy application will have transformed into a state-of-the-art solution, with modern interfaces and GUI's, servicing your every need.

That ideal world might be closer than you think. With USoft you can rapidly modernize legacy applications to our low-code platform and deliver resilient and future proof solutions.

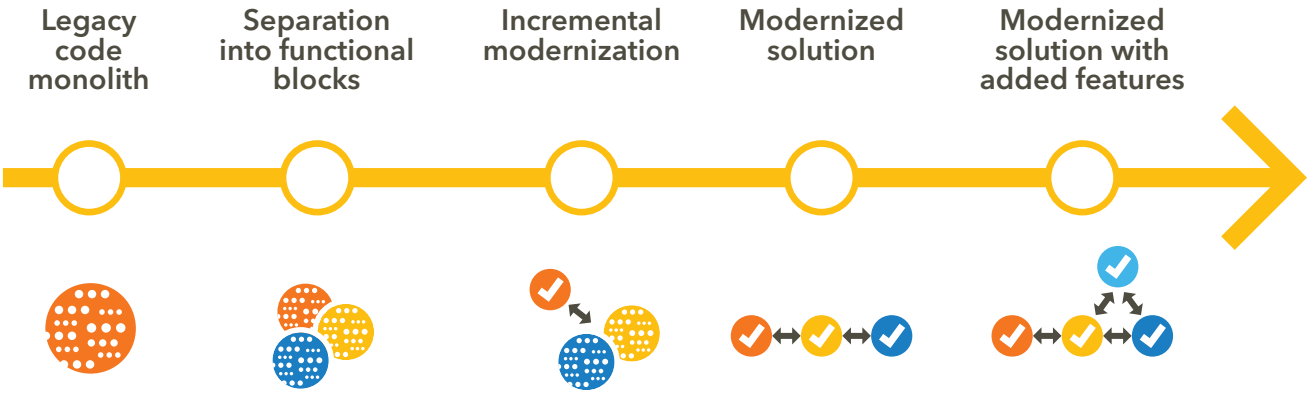

With the Simplifier, a specific tool designed for legacy system analysis, you can unravel complex legacy applications and extract an unprecedented amount of detail. The Simplifier extracts for example application meta data and business rules.
This information is then converted to the USoft low-code platform and captured in natural language and visual models. This ensures a lasting knowledge repository that gives you full and easy-to-understand insight into the legacy application and instantly allows you to define functionality enhancements and extensions in the process.

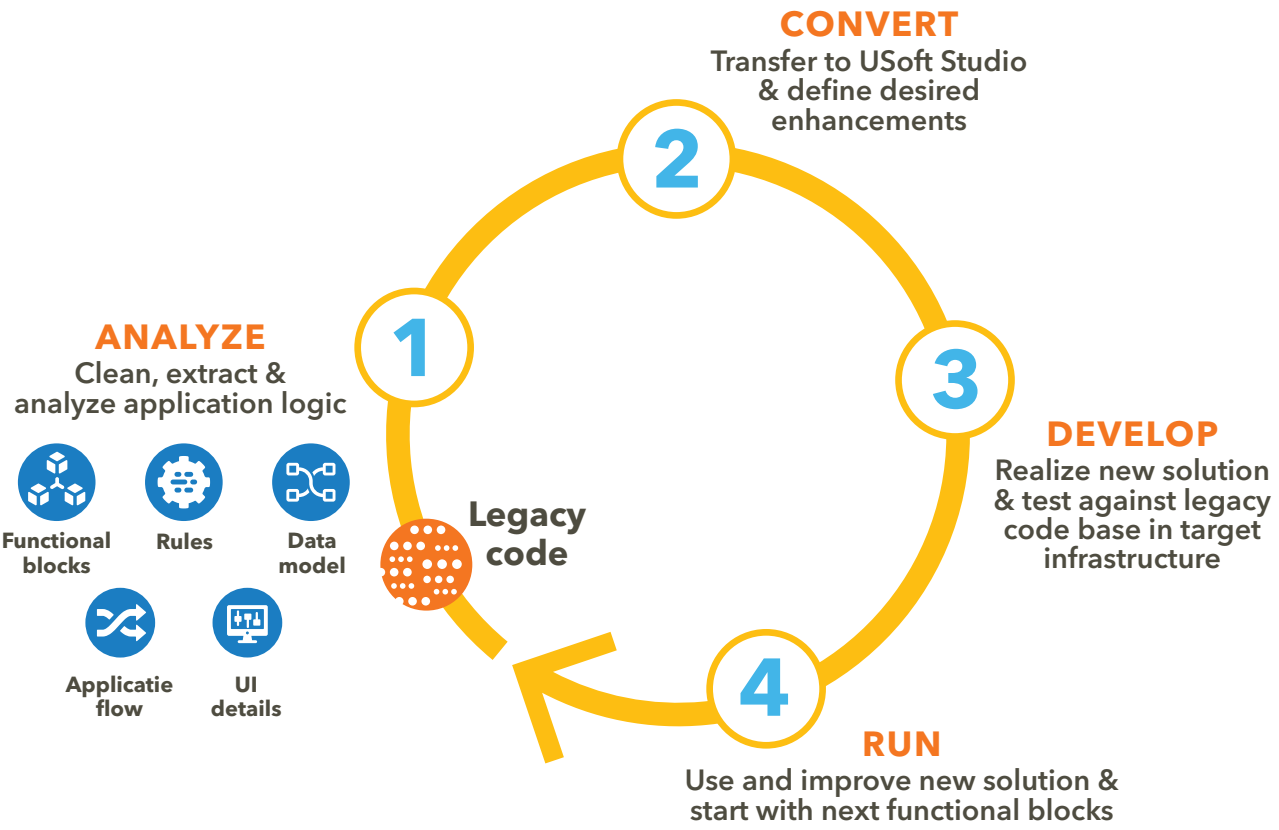

USoft's Modernization approach

Once the details of the legacy application have been captured, the new solution is realized using the USoft low-code platform. And because you are working with low-code, you always have the flexibility to easily include new business needs in the process and provide a modernized solution with enhanced business value.

Incremental modernization & functional enhancement

Legacy modernization pipeline

Are you ready to transform your legacy software and secure a modern IT landscape?

USoft is the platform to optimize your modernization process and delivers:

- **High-quality analysis** of existing legacy systems
- Ability to **clean & separate** functional entities and business rules
- An **incremental & fully controlled** modernization process to reduce risks and maximize business impact

The benefits of USoft legacy modernization

To modernize your legacy software is of fundamental importance for your digital transformation. USoft helps you to:

Adapt faster

- Meet your customer & business demands
- Easily add & extend functionality

Become future proof

- Integrate with ease
- Scalable & flexible cloud architecture
- Be ready for future technologies

Preserve key business knowledge

- Regain insight in legacy (lost) business rules

Reduce costs

- Improved team productivity & development speed
- Lower solution TCO

Put youself back in charge of your legacy core business applications with the USoft legacy modernization approach

The benefits of USoft low-code for core systems

Typical low-code benefits

- **Improve data quality & consistancy with 50%**
- **Reduce TCO (starting at 40%)**
- **Strong reusability & scalability**

Why USoft?

Low-code technology has fast become an essential driving force for digital transformation and is broadly recognized for its key benefits that directly address both business & IT needs:

- Improved business agility & business user focus
- Development speed
- Enhanced productivity
- Strong ease of use, flexibility & maintainability
- Reduced costs

What if the benefits of low-code could also be made available for the more complex and diverse development of core systems? What if organizations can actually simplify complexity and help accelerate digital transformation and innovation, all the way to the core of the organization?

This is where USoft's low-code platform comes into play.

The USoft low-code platform is specifically designed to build innovative software for business-critical and complex core applications. The USoft platform is engineered around the power of business rules, so that the context of your organization is always at the heart of everything you do.

Your business rules are captured in natural language and are executed in software through sophisticated rules engine technology.

This is unique to other low-code platforms and makes USoft particularly strong in dealing with context specific, complex and data essential environments.

At USoft we understand that organizations desire the freedom to design their own business operations. We believe that software may never pose an obstacle and should instead clear that path. USoft offers organizations a low-code development platform for developing and redesigning business-critical systems.

The intelligent, flexible low-code platform is the perfect solution for clients who want to innovate fast and adapt to the needs of the market. Our technology is engineered around the power of business rules so that your organization's context is always at the heart of everything you do. To achieve the best result, USoft always immerses itself in the essence of the client's business operations and has a great track record for client satisfaction and excellent service.

USoft's low-code platform is used worldwide in government, aviation, education, financial services, transportation, and logistics.
