

USoft training and coaching

USoft offers tailored training and coaching programs that help you become proficient in USoft technology.

Training USoft Platform Basics

3 days

Euro 3.000,- pp

The USoft Platform Basics training program is intended for all those involved in implementing the USoft platform, whether in an existing IT landscape or as a relatively stand-alone application. When you complete this program, you will be able to implement software that leverages the USoft rules engine. As an indication, in many settings, this program takes 3 days to complete.

Training USoft Services

2 days

Euro 2.000,- pp

This training program enables you to design and implement the deployment of USoft rules engines in complex IT landscapes and to create REST or SOAP services that offer machine-to-machine communication with the rules engine, for example, for the orchestration of informational processes across an organisation with many stakeholders. This program is

for moderately technical people, who can configure and customise generated code. It is a prerequisite that you complete the USoft Platform Basic Training Program first.

Prerequisites knowledge skills

Basic data modelling skills and an understanding of SQL are a prerequisite. USoft offers separate 1-day introduction programs and 1-day refresher courses in these subjects. Mainstream programming skills in languages or frameworks such as Java, .NET or JavaScript are not required. Knowledge of XML/XSLT is helpful but not required.

Get certified in the USoft technology

Training USoft Web Applications

2 days

Euro 2.000,- pp

This training program enables you to create highly maintainable HTML-based user interfaces on top of the USoft rules engine, leveraging USoft's capability to generate a combination of rules-based logic and default UIs from a data model with business rule implementations. This program is for moderately technical people, who can work with an environment coded in HTML/CSS/JavaScript. It is a prerequisite that you complete the USoft Platform Basics training program first.

Training Business Rules Authoring - URequire

2 days

Euro 1.300,- pp

This 2-day URequire awareness course enables you to use the USoft rules-based platform to full effect by learning how to express business rules optimally in English or in Dutch. For this course, OMG's Semantics for Business Vocabulary and Rules (SBVR) standard is the frame of reference, and the USoft-owned URequire tool for business rule specification is used as a vehicle. Relationships with neighboring modelling techniques such as BPMN, DMN and Enterprise Ontology are discussed, as well as the relationship with requirements analysis, requirements management, and agile methodology. This program is suitable for business consultants. There are no specific prerequisites.

Become proficient in USoft Technology

Each training program is a series of interactive sessions with an experienced practitioner of USoft technology and applications.

The training takes place standard at our head office in Naarden, the Netherlands. Training dates will be planned in consultation. We offer in-company trainings upon request. Please contact us for a specified offer.

About USoft

USoft is a global software provider with 30 years of experience. We enable organisations to become smarter and more efficient in their business processes. We are experts in areas including privacy, customer experience and real-time decision making.

Our truly low-code development platform allows you to simply model your ideas while working software is automatically created by the platform. Our software uses the concept of business rules which contributes to flexibility, ready to test and optimise and to align with the required business value. It is built on the concept that even complex software should be easy to build and maintain. Furthermore, our Service Framework makes it easy to connect to other applications.

USoft is a privately-owned company headquartered in The Netherlands, with additional offices in the UK and Serbia. We serve a broad range of customers in the sectors of financial services, healthcare, aviation, transportation and government. In addition to our portfolio, USoft provides the integration platform for BioTrust, our sister company and global provider of multimodal biometric authentication solutions.
